

Single tied

MWT & MFT series

These expansion joints are made of one single bellows element with end connections plus a tie rod system.

Regardless of accessories, such as liners and covers, this model absorbs all types of movements in any length of piping but it is mainly used to absorb axial movements and small amounts of lateral movement.

MWT

This type of Expansion Joint is made up of one single bellows provided with welding ends.

MFT

This type of Expansion Joint is made up of one single bellows equipped with fixed flanges.
