

Design Attributes

Wafer Dual Plate Check Valves use two half-sphere discs and a connecting hinge to create a closure element that collapses when positive flow exists, and folds back to a full circular disc when reverse flow exists. Discs are preloaded with springs that favour the closing of the valve when no positive flow. These valves are featured as a light, compact and economic option. With a dedicate design and production, they offer a low pressure drop in comparison to other wafer check valves, and full seat tightness, being widely used mainly in clean water and oil systems, with significant savings in space and investment costs for installation.

Main Features

Valve design: API 594
Nominal Pressure: 150#
Face to face length: API 594
Valve end connections: Wafer design to suit ASME B16.5 / B16.47 RF
Marking: MSS SP-55
Pressure Tests: API 598
Primer painted for protection during storage and transport
Product compliant with Directive 2014/68/EU on Pressure Equipment (PED) for European Union territory

Main Duties / Limits of use

Fluids compatible with materials of construction. Questions referring to chemical resistance, please consult us
Pressure / Temperature Rating to ASME B16.34
For products compliant with Directive 2014/68/EU, observe also limits acc. to Annex II tables 6 & 8 (gases & liquids group 1*) and tables 7 & 9 (gases & liquids group 2*) up to category III
*Classification of fluids (group 1 or 2) acc. to Directive 2014/68/EU, Article 13
